

FOR IMMEDIATE RELEASE

NOVEMBER 2011

AFTERDISASTER® AWARDED FEDERAL EMERGENCY SERVICES CONTRACT THROUGH GSA

(Greensboro, N.C.) – The General Services Administration has awarded a 5 year contract to AFTERDISASTER®. This contract engages AFTERDISASTER® to provide all types of emergency services, including the provision of emergency electricity through generators, water damage mitigation, fire and smoke damage cleanup, mold remediation services, and related product sales to all branches of the Federal Government.

AFTERDISASTER® specializes in the provision of emergency and restoration services, as well as general contracting, for water, fire, smoke and mold damage victims in residential, commercial, institutional and governmental buildings. They service all markets in NC, SC, and VA from offices in Greensboro, Charlotte, and Raleigh, NC. They also provide catastrophic and large loss emergency services to governmental, commercial, and industrial customers throughout the United States and the Caribbean from the Large Loss Division based in Fort Mill, SC.

AFTERDISASTER® Chairman, Joseph B. King, Jr. said *“Being awarded this contract is the result of two years of deliberate, focused efforts by our Large Loss Division and administrative staff. We look forward to serving the needs of the federal government and the General Services Administration”*.

Federal Contracts are awarded by the GSA only after careful review and confirmation of competitive and fair pricing, significant resources and capabilities, broad project management skills, and successful completion of many projects of various sizes and scopes of work for the government and private sector.

Vice President of the Large Loss Division at AFTERDISASTER®, James H. Summer, Jr. added *“This paves the way for an even faster approval time since all pricing is now formalized and agreed to in advance. We have been accustomed to responding immediately, and that will not change. However, the approval process for the federal government is now completed well in advance of any emergencies, which will make the administrative processes much more efficient.”*
